The Course Menu may be hidden to increase the viewable area of the main content frame within your course. This feature may be helpful when accessing areas of a course where you need a larger viewable area to see the content (e.g. Grade Center, Discussion Board forums, Blogs, Journals, etc.). Once hidden, the course menu can be shown again at any time.

To show/hide the course menu, click on the show/hide course menu button on the middle right-hand side of the main content frame. This button acts like a toggle. Click on it once to hide the course menu. Click on the show/hide course menu button a second time to show the course menu again.

NOTE: Hiding and showing the course menu is course and user specific. Individuals can hide a course menu within any given course, while still being able to view the course menu within other courses.
